User Stories

1) The user (patient) logs into their account, clicks on the icon associated with test results, and can view the details, including the outcome, of all their tests. The user may choose to filter by test type as well by clicking on the button associated with filtering.

2) The user (patient) logs into their account, clicks on the icon associated with symptoms, and will be prompted to enter what symptom they have, when it started, what it is, and how bad it is. Users will also have the option to add an end date of past symptoms when they feel better.

3) The user (patient) logs into their account, clicks on the icon associated with patient contacts, and will then be prompted to enter information (including the name and address) of anyone they've recently been in contact, and further asked to specify where the interaction occurred and on what date.

4) The user (doctor) logs into their account and clicks on the icon associated with patient's information. From there, they will be able to view each patient. If the patient is new, the user (doctor) can click on the icon associated with adding a new patient and will be prompted to add relevant patient information.

5) The user (doctor) logs into their account, clicks on the icon associated with patient's information. By clicking on a patient's name, they will be able to view the results of all their tests, as well as the patient's symptoms. The doctor may also add a new test to a patient by clicking on the icon associated with adding a new test and will be prompted to add relevant information.
